Abstract (en)

[origin: WO2015185825A1] The invention relates to a method for protecting the sale of an object, comprising steps that consist of: storing an identifier (PCA) of an object (OB) and an identifier (UID) of the owner of the object, by a server (BSRV) and in a secure memory of an electronic tag (TG) linked to the object; transmitting the identifier of the object, from the electronic tag to a terminal (SP1); the server providing information (PINF) relating to the object (OB) in response to a request designating the object; transmitting to the server a request to update the identifier of the owner, containing information relating to a new owner of the object; the server storing the information relating to the new owner in connection with the identifier of the object; the server generating a write request (EID) containing an identifier (UID) of the new owner; transmitting the write request to the electronic tag; and storing in the electronic tag the identifier of the new owner received in the write request.
