Abstract (en)  
[origin: US2017087878A1] A corrugated-board machine for manufacturing corrugated board comprises a material-web output device for outputting a material web, a conveying device for conveying the material web along a material-web conveying path, a printing device disposed downstream of the material-web output device for producing at least one printed region on the material web, a printed-region drying arrangement disposed downstream of the printing device for drying the at least one printed region and a connecting device disposed downstream of the printed-region drying arrangement for the connection of the printed material web to at least one further material web in order to produce a printed corrugated-board web laminated on at least one side. A start of drying of the at least one printed region applied to the material web is influenceable by the printed-region drying arrangement.
