Abstract (en)

A connecting rod is provided. The connecting rod includes an elongate body and an electric connecting element. The elongate body has a first end portion, a second end portion, a hiding surface and at least one supporting surface. The hiding surface and the at least one supporting surface surround an extending axis of the elongate body and are disposed between the first end portion and the second end portion. An area of the hiding surface is smaller than or equal to an area of any of the at least one supporting surface. The electric connecting element is disposed at the hiding surface and extends from the first end portion to the second end portion.
