Abstract (en)
[origin: EP3151389A2] A rotary electric machine (100) includes a rotor core (30) fixed at a rotation axis, a stator core (20) arranged facing the rotor core and including a plurality of teeth (22), a plurality of windings (50) wound at the plurality of teeth of the stator core, a plurality of winding connection terminals (101, 102, 71, 72) connected to respective ends of the plurality of windings, a plurality of bus bars (81, 82, 83, 84) connected to the plurality of winding connection terminals, each of the plurality of bus bars being formed in either an arc form or an annular form, and a bus bar holder (90, 93) holding the plurality of bus bars in a laminated state and including a holder engagement portion (91, 93a) engaging with a bus bar engagement portion (73b, 93b) which is provided at least at one of the plurality of bus bars.
