Abstract (en)
[origin: WO2015185139A1] A nozzle (1) for a vacuum cleaner is provided comprising a nozzle head (2), at least one brush (17) retractable into the nozzle head, and at least one support means (21, 22) arranged to support the nozzle head on a surface to be cleaned (26, 27) and being retractable into the nozzle head. The nozzle further comprises a mechanism (30) arranged to set the brush and the support means in: a first setting, in which the brush and the support means are fully retracted in the nozzle head, a second setting, in which at least a portion (15, 16) of the brush is partly retracted in the nozzle head and the support means is projected further out from the nozzle head than said portion of the brush so as to form a gap between said portion of the brush and the surface to be cleaned, and a third setting, in which the brush is fully projected.
