Abstract (en)
[origin: WO2015185631A1] The invention relates to a dishwasher (1), in particular a domestic dishwasher, having a basic structure (2), having at least one loading-level element (10), having at least one guide rail (12), along which the at least one loading-level element (10) can be displaced in a linear manner, having at least one control arm (14), which retains the at least one guide rail (12) in a pivotable manner on the basic structure (2), the control arm (14) being articulated on the guide rail (12) such that it can be pivoted about a pivot axis (22), having a blocking part (26), which is arranged on the at least one loading-level element (10), and having a blocking counterpart (27), which is arranged on the control arm (14), wherein the blocking part (26) and the blocking counterpart (27), when in an enabling state, enable linear displacement of the at least one loading-level element (10) along the at least one guide rail (12) and, when in a blocking state, block linear displacement of the at least one loading-level element (10) along the at least one guide rail (12), wherein the blocking part (26) or the blocking counterpart (27), in order to be adjusted between the blocking state and the enabling state, can be rotated about an axis of rotation (30) in the blocking counterpart (27) or the blocking part (26), respectively, the axis of rotation (30) being equiaxial with the pivot axis (22) of the at least one control arm (14).
