Abstract (en)
[origin: WO2015184529A1] An apparatus has a golf ball holder including a receiver assembly having a resilient wall. The resilient wall is configured to: (A) form a stressed shape in response to the application of a stressing force to the resilient wall of the receiver assembly, and in the stressed shape, a golf ball is releasable from the receiver assembly; and (B) form an unstressed shape in response to the removal of the stressing force from the resilient wall of the receiver assembly, and in the unstressed shape, the receiver assembly is ready to receive and to hold the golf ball.
