Abstract (en)
[origin: WO2015199637A1] The present invention relates to blister components for blister packages formed from multilayer thermoplastic films. In one embodiment of the present invention, the thermoformed blister component comprises a first exterior layer of polyvinylchloride (PVC) or polyvinylidene chloride; one interior layer comprising a blend of a high density polyethylene, high density polyethylene nucleation additive and optionally, a hydrocarbon resin, or a high density polyethylene and has a thickness of between 50 m to 254 m (2 mil to 10 mil); and a second exterior layer comprising a material selected from the group consisting of polyvinylchloride, polyvinylidene chloride, cyclic olefin copolymer, polypropylene, high impact polystyrene, general purpose polystyrene, styrene block copolymer, polyethylene terephthalate, oriented polyethylene terephthalate, amorphous polyethylene terephthalate, glycol-modified polyethylene terephthalate and polylactic acid.
