Abstract (en)

[origin: WO2015185657A1] The invention relates to a method for processing an organic oil in steps, comprising the following steps: A) providing a raw oil; B) degumming the raw oil by adding water or acid to the raw oil and forming at least two phases, an aqueous phase and an oil phase, and separating the aqueous phase enriched in phospholipid from the oil phase; C) adding sodium hydrogencarbonate and/or sodium acetate to the oil phase from step B, and removing alkaline-earth compounds and/or phospholipids and/or stearyl acetate dissolved or suspended in an aqueous phase from the oil phase. The invention further relates to a device for performing the method.
