Abstract (en)
[origin: WO2015185832A1] The invention relates to an electric switch comprising: - two fixed contact elements (10, 11), - a moving contact element (30), which is adapted to toggle between a first stable position in which it opens the electrical contact between the two fixed contact elements and a second stable position in which it establishes electrical contact between the two fixed contact elements, - a control key (40) for controlling the displacement of the moving contact element, and - means for braking the toggling of the moving contact element. According to the invention, said braking means comprise a braking accessory (50), a support part of which is fixed to the control key and a damping part of which is adapted to brake the toggling of said moving contact element.
