Abstract (en)

[origin: WO2015185740A1] The invention relates to a cathode material for an electrochemical cell, in particular lithium sulphur cell, which comprises at least one cathode active material (ES) and at least one, in particular, lithium ion-conducting or lithium ion conductive polymer electrolyte (AQL) and/or at least one inorganic ion conductor, in particular lithium ion conductor. The at least one cathode active material (ES) comprises a polymer (E) with, in particular, covalently bound sulphur (S). The invention also relates to a cell and battery equipped therewith.
