Abstract (en)
[origin: CA2934471A1] The invention relates to a retaining part (10) for the pull-resistant holding of a pin-shaped contact element (100), comprising a housing (20) with an accommodation space (22) for accommodating the contact element (100) and at least one primary securing element (30) which protrudes into the interior of the accommodation space (22) and can be radially deflected, having an axial stop (32) for a projection (110) of the contact element in order to secure the contact element in a pull direction (Z) opposite to an insertion direction (E), wherein a secondary securing element (40), which in a securing position contacts at least in sections the outside of the primary securing element (30), is provided to prevent the radial (R) deflection of the primary securing element (30).
