Abstract (en)

A measurement apparatus (1) is attached to a guide rail (13) above a car (12). Next, a measurement by the measurement apparatus (1) is performed, and first dimensional data including dimensional data on an upper part of a shaft (8) is acquired. The measurement apparatus (1) is detached from the guide rail (13), and the car is moved upward and then stopped. The measurement apparatus (1) is attached to the guide rail (13) below the car (12) after the car (12) is stopped. A measurement by the measurement apparatus (1) is performed, and second dimensional data including dimensional data on a lower part of the shaft (8) is acquired. The acquired first dimensional data and the acquired second dimensional data are integrated, and dimensional data on the entire shaft (8) is created.
