Abstract (en)

[origin: WO2015188813A1] The invention relates to a sock, in particular a football sock, having a foot portion (1) and a leg portion (2), wherein the foot portion merges into the leg portion and the sock has a basic material, wherein the sock, at least in the lower region of the leg portion (2), has a first portion (5) with a higher average coefficient of friction than the basic material, and therefore a piece of sports equipment, in particular a football, adheres better to the first portion than to the basic material.
