Abstract (en)  
[origin: WO2015189516A1] The invention relates to a hairstyling device comprising: - a portable unit having steam distribution means; - an assembly member (4) rigidly mounted in the portable unit and having a first fluid distribution line (5) to the steam distribution means; and, - a cord having at least one cable for the electrical supply of the portable unit and at least one line for passage of the fluid. According to the invention, the cord is linked to a connection unit (12) that is connected to the assembly member (4) in such a way as to pivot around a longitudinal axis (X), the connection unit having a second fluid distribution line (15) interacting with the first fluid distribution line (5) of the assembly member, and the connection unit (12) and the assembly member (4) respectively comprising first and second electrical connection means, and said first and second electrical connection means and the first and second lines being configured to ensure a continuous electrical and fluid supply during rotation of the connection unit (12).
