Abstract (en)

[origin: WO2015189131A1] The grinding system for comminution of grinding stock substantially consists of one first grinding circuit comprising a roller press and a first separator, and a second grinding circuit comprising a dynamic separator and a ball mill. The first separator is designed as a static separator and arranged below the roller press, whereas the dynamic separator is arranged at the height of the roller press or below the roller press. In the method for comminuting grinding stock, the grinding stock is comminuted in a first grinding circuit comprising a roller press and a first separator, and in a second grinding circuit comprising a dynamic separator and a ball mill, wherein a first separator designed as a static separator and arranged below the roller press and a dynamic separator arranged at the height of the roller press or below the roller press are used.
