Abstract (en)  
[origin: WO2015189520A1] The invention relates to a mandoline device (D) for cutting foodstuffs, of the type comprising a moving blade support (100) defining a cutting plane and moving according to an alternating translational movement with respect to foodstuffs, having an inverted configuration and having a case (400) associated with a plunger (410) allowing the foodstuffs to be inserted and held in place on the passageway of the moving blade support (100), remarkable in that it comprises a receptacle (200) with an opening (210) having edges presenting sliding surfaces for said mobile blade support, a lid (300) which, independent of the receptacle (200), closes by engaging with said edges (220) and by holding said mobile blade support (100) in contact with the sliding surfaces, said lid (300) being preformed with a passage (310) which, in a transverse direction with respect to the track of the mobile blade support (100), receives the case (400) associated with a plunger (410) allowing foodstuffs to be inserted and held in place on the passageway of the mobile blade support (100).
