Abstract (en)

[origin: WO2015143484A1] The present invention relates to a security device (10) for a container closable by a slide fastener having a slider (16). The security device (10) includes a lower part (12) adapted for attachment to the container, means (14) for attaching the security device (10) to the slider (16), directly or indirectly, an upper part (20) for retaining the attaching means (14), receiving means (24) for receiving a frangible seal (26) having a locking member (42) and preventing retraction of the frangible seal (26) except by fracture thereof, and means (28) to limit access to the attaching means (14) and the receiving means (24). The access limiting means (28) includes a locking element (30) adapted to engage the locking member (42) of the frangible seal (26) when the frangible seal (26) is received in the receiving means (24) so as to further prevent retraction of the frangible seal (26). The present invention also relates to a cover (28) and a frangible seal (26) for the security device (10).
