Abstract (en)
[origin: WO2015189258A1] An ironing system (1) according to the invention comprises an iron (10) and a base (20) with a locking device for the iron, wherein the locking device has a first locking element (31) and a second locking element (32), located opposite the first as seen in relation to the iron, said locking elements being suitable for engaging respectively with a first end (11a) and an opposite, second end (11b) of the iron (10). The second locking element (32), in the unlocked position, is disengaged from the second end (11a) of the iron and, when the iron (10) is pushed down onto the locking device, is triggered and displaced into a locking position, in which the second locking element (32) is in engagement with the second end (11a) of the iron.
