Abstract (en)
  [origin: WO2015189391A2] The invention relates to a lock system comprising a lock plate (14) which is arranged in a fixed manner on a first
  building or furniture part (10) and a lock (20) which is arranged in a fixed manner on a second building or furniture part (12), which comprises a
  lock (26) which can be moved between a locking position, in which it locked to the locking plate (14), and an unlocking position. Said lock system is
  characterised is that the lock (26) is embodied as a latch bolt in order to move from the unlocking position into the locking position, and that the lock
  (20) comprises an electric drive which interacts with the lock in order to move said lock from the locking position into the unlocking position.
