Abstract (en)

[origin: WO2015189683A1] In an easily transported and assembled wall structure with or for sliding door, a peripheral frame (1) supports wall panels (14, 15) defining a compartment (41) for a door (16) via a first, a second, a third and a fourth rectilinear support element (10, 10A, 11, 11A) forming two pairs. The door (16) may slide along guide means (12). A respective first, second, third and fourth end element (100, 100A, 110, 110A) is engaged with a first extremity (101a) of each rectilinear support element (10, 10A, 11, 11A), in particular in a socket-to-plug manner, a head (105) of which comprises one or more engagement portions (106) for engagement with a respective elongate side (120) of the guide means (12).
