Abstract (en)
[origin: WO2015193271A1] The invention relates to at least one safety device (40) for a breech system (1) for a weapon that is, in particular, externally driven, comprising a trigger lever (41), as well as a breech carrier (2), a breech head (3) carried by said breech carrier (2), and a firing pin (7) located therein which comprises a firing pin spring (7.1). When said breech head (3.1) is rotated, a firing pin lug (7.3) of the firing pin (7), at the end of said firing pin (7), is guided so as to lock behind the weapon trigger lever (41) and is depressed by same. The firing pin (7) additionally comprises a firing pin main lug (7.2), said firing pin lug (7.3) and firing pin main lug (7.2) being functionally interconnected by means of the firing pin (7). The firing pin main lug (7.2) is secured in turn by an intermediate sheath (20) between the breech carrier (2) and the breech head (3). These safety devices (10, 40) are supplemented by an additional firing pin safety (50). This comprises a bar (50) that has a feed-through (51) through which said firing pin (7) is guided. A projection (53) of said bar engages with the recess (7.4) of the firing pin (7). When the breech head (3) is rotated, this projection (53) is guided out of said firing pin (7).
