Abstract (en)

[origin: WO2015188988A1] A lithographic apparatus comprising: a channel (46) for the passage therethrough of a two phase flow, wherein the channel is formed within a block, the block being of a first material (100); a second material (160) between the first material and the channel, wherein the second material has a specific heat capacity higher than that of the first material; and a third material (90) between the second material and the channel, wherein the third material has a thermal conductivity higher than that of the second material.
