Abstract (en)
[origin: WO2015189039A1] The invention relates to a laminated motor vehicle glass panel which consists of two glass sheets joined by means of an intermediate sheet, the glass panel comprising a system of heated layers which is applied to one of the sheets and, to the edge of the same sheet, a substantially opaque masking strip, in contact with the glass sheet, the system of heated conductive layers at least partially covering the masking strip. The glass panel further comprises power supply busbars in contact with the system of layers in the portion covering the masking strip, characterised in that the masking strip has a roughness no greater than 0.5 μ and preferably no greater than 0.1 μ .
