Abstract (en)

[origin: KR20150144282A] The present invention relates to a technology for a sensor network, a machine to machine (M2M), a machine type communications (MTC), and an Internet of things (IoT). The present invention can be used for an intelligent service (smart home, smart building, smart city, smart car or connected car, health care, digital education, retail business, security, safety-related service, etc.) based on the technology. According to an embodiment of the present invention, an operation method of an electronic device comprises the following steps: measuring intensity of each of multiple reception signals which are received from a plurality of lighting devices; and displaying the lighting devices according to on the intensity of each reception signal.
