Abstract (en)

[origin: US2017035124A1] A glove for food handling has luminescent material kneaded throughout the entire area of the glove main body for food handling. The luminescent material emits light in response to ultraviolet rays so that even if a broken piece of the glove for food handling mixes in food, the broken piece can be easily found by irradiating the food with the ultraviolet rays from an ultraviolet light source such as a black light.
