Abstract (en)
[origin: EP3156234A1] The problem of the present invention is to provide an ink jet head with which it is possible to suppress the occurrence of separation in a fastened part between a first member and a second member fastened to the first member when an ink heated to a prescribed temperature is discharged. The ink jet head is an ink jet head of an ink jet recording device for discharging an ink heated to a prescribed temperature, and is characterized in being provided with a first member and a second member fastened to the first member, with a silane coupling agent interposed the interface between the first and the second members.
