Abstract (en)
[origin: CN106592026A] The invention relates to a textile machine with a service unit and a method for positioning the service unit in front of a working position. The textile machine (1) has a plurality of work stations (2) arranged side by side and a service unit (3) which can be moved along the work stations (2) for the operation and / or maintenance of the work stations. According to the invention, a permanent magnet (4) is arranged at each of the work stations (2), at least one first Hall sensor (5) is arranged on the service unit (3), and the permanent magnet (4) and the first Hall sensor (5) are arranged such that the permanent magnet (4) of the working point (2) is detected by the first Hall sensor (5) of the service unit (3) positioned in front of a working location (2).
