Abstract (en)

[origin: CA2952324A1] An attachment for a snowshoe comprising front holding means, and rear holding means, each of the holding means consisting of a holding member for holding the boot, at least one of the holding members comprising at least one support element (11) allowing the corresponding member to rest constrained against the boot, wherein said holding member is movable between a released position of the boot and a holding position of the boot, said attachment further comprising means (110) for causing the holding member to move from the released position of same to the holding position of same, in which position it bears against the boot, said means consisting of a movable part disposed under the area occupied by the boot, linked at least kinematically to said corresponding holding member, the actuation of the movable part by the boot during fitting, causing said corresponding holding member to move into the holding position of same, wherein the support element (11) is a flexible member.
