Abstract (en)  
[origin: CA2949893A1] The invention relates to a shear bar (1), in particular for a wood chipper for producing wood chips, comprising at least one cutting edge (31) made of a hard material, and a contact surface (22) leading to the cutting edge (31), said cutting edge (31) being formed by a plurality of hard material elements (30) arranged next to one another along the cutting edge (31) on at least one base body (10). In order to achieve a strength-optimised embodiment having a long service life and simple assembly, the hard material elements (30) are secured to the at least one base body (10) by means of an adhesive connection (19).
