Abstract (en)  
[origin: WO2015193831A1] A piece of equipment (1) for the containment of material, comprising a bearing structure (2) which can be transported by means of a vehicle movable on wheels, a plurality of containers (3) for the collection of material supported by the bearing structure (2) and comprising means for the simultaneous lifting and tilting (5) of each of said containers (3), the latter being movable between a loading position, wherein they are placed resting on the bearing structure (2), and an unloading position, wherein they are lifted and rotated with respect to the loading position so as to allow the release of the material contained inside, where the lifting and tilting means (5) comprise at least a movement scissor (20) placed between the bearing structure (2) and at least one of the containers (3) and movable between a closed configuration, corresponding to the loading position of the relative container (3), and at least an open configuration, corresponding to the unloading position of the relative container (3), the scissors (20) comprising at least a first lever (21) and at least a second lever (22) hinged to each other and having a different length.
