Abstract (en)  
[origin: CA2950231A1] The invention relates to a panel assembly (34) having a plurality of panels (30), of which each comprises a base element (10) which has a decorative paper (12) on the surface thereof facing away from the substrate, which decorative paper reproduces the appearance of a natural material, wherein each panel (30) is provided, using an embossing element, with a surface structure substantially synchronous to the decoration (16) of the visible face of the decorative paper (12), and the decoration (16) of a first number of panels (30-1) is subdivided by means of an imitation joint (32) extending in the longitudinal direction (L) of the respective panel (30-1) into a first decorative portion (16a) of a first predetermined width and into a second decorative portion (16b) of a second predetermined width, whereas the decoration (16) of the remaining panels (30-2) is free of such subdivisions in the width direction (B). The invention further relates to an embossing element and a decorative paper sheet for producing such a panel assembly.
