Abstract (en)

[origin: WO2016045885A1] The invention relates to a method for transmitting data of an application, which runs on source nodes, to a target node, wherein required resources are requested for said transmission in a network and wherein the network can be subdivided into at least two virtual sub-networks and has a plurality of nodes, comprising the following steps: a. requesting of resources which are specified by a plurality of quality parameters via an application which runs on the source node; transmitting of data of the application via a virtual sub-network in which the requested resources are available.
