Abstract (en)  
[origin: EP3159060A1] This vertical roller mill (1) is provided with a reduction gear (11) which is arranged below a rotary table (2), a vertical transmission shaft (13) for transmitting driving force from the reduction gear (11) to the rotary table (2), an output flange (23) to which an upper end of the vertical transmission shaft (13) is connected at the center portion thereof and which configures a bottom surface of the rotary table (2), a thrust bearing mechanism (27) for slidably supporting a peripheral portion of the output flange (23) from below, and a radial bearing mechanism (38) for restricting movement of the output flange (23) in the radial direction.
