Abstract (en)
[origin: EP3159274A1] This document describes a stopper (1), bung, or plug for a container, such as a bottle, which allows the container to be hermetically sealed and to be closed again after opening. The said stopper of the invention permits the proper closure of a bottle not only when the product is originally bottled, but also after opening the bottle, in an easy and effective manner, because due to the presence of a series of recesses and section changes with a transition (5) between them, the stopper may be reinserted easily and efficiently
