Abstract (en)

[origin: WO2016001552A1] The present application relates to a cosmetic pot having a base (2) provided with an indentation on the neck, and a lid (3) configured to be fastened to the base (2). The lid (3) comprises a plate and a cap (5) that are configured to pivot with respect to one another. The cap (5) comprises a radial cam for translationally moving at least one coupling element (410) between a first position in which a claw of the at least one coupling element (410) is engaged in the indentation with the lid (3) in the rest position and the pot closed, and a second position in which the at least one coupling element (410) has been translationally moved with respect to the first position. The lid (3) also comprises at least one coupling return element (416) configured to automatically return the at least one coupling element (410) to the first position.
