Abstract (en)

[origin: CA2953729A1] Packaging for at least one object (5), preferably having a mass of between 2 and 25 kg, comprising: a body (15) having at least two parts (15A, 15B), which is able to be moved between a closed configuration defining a housing (32) suitable for receiving the object and an open configuration in which the two parts are spaced apart from one another to allow the object to be removed from said housing, the body defining, in the closed configuration, a lower face intended to rest on a surface (S) in a bearing direction (D); and a member (20) for fixing the two parts together in the closed configuration. The body comprises a base (30) that acts as a support for the object in the open configuration, the base defining at least a portion of the lower face in the closed configuration.
