Abstract (en)

[origin: WO2015197389A1] The invention relates to a carriage arrangement (10) with a control arm (18), which is arranged in a rotatable manner on an opening-out arm (16). The control arm (18) is connected to a carriage (12) of the carriage arrangement (10) via a control pin, which is guided, in part, in a guide track (28) of the carriage arrangement (10). The control pin here is fastened eccentrically. The eccentric fastening of the control pin (64) gives rise to the control arm (18) being spaced apart relative to the carriage (12) in the region of the guide track (28). As a result, the control arm (18) is also spaced apart from a running rail (32), in/on which the carriage (12) can be arranged in a displaceable manner. The carriage arrangement (10) is thus designed in a very compact and stable manner.
