Abstract (en)  
[origin: US2015379214A1] Management of medical information including collection of medical information from a data source, redaction of at least a portion of the medical records, and/or formatting the medical information for access by users. Accordingly, exchange of medical information may be facilitated, for example, to facilitate data analytics by internal users and/or one or more external entities. The medical information may have patient identifying information and/or protected health information (PHI) removed therefrom prior to being stored in a shareable data portion for access by users. Further still, the medical information in the shareable data portion may be formatted according to an identity of a user accessing the data, a context in which the data is to be used, and/or a requested format of the data. In turn, the exchange of medical information may facilitate data analytics that may serve a variety of beneficial purposes.
