Abstract (en)

[origin: WO2015197545A2] A contact device for contacting an energy storage cell (1), comprising at least one printed circuit board (5) for discharging the electrical energy stored in the energy storage cell(1), wherein at least one electric pole of the energy storage cell (1) is pressed by a releasable mechanical connection (7) with a particular pressure against an electroconductive layer (5c) of the at least one printed circuit board (5) located on a front side of the at least one printed circuit board (5) facing the energy storage cell (1)
