Abstract (en)
[origin: WO2016000689A1] The invention relates to a cable link that has the following features: 1.1 the cable link comprises at least one cable channel which is open upward, can be closed by a cover, and has a longitudinal direction; 1.2 this cover is secured to the cable link by one end parallel to said cable channel, by means of a pivot axis, and has, in the region of its free end which lies opposite, a reinforcement strip that points away from an upper side of said cable link; and 1.3 the area of said opposite end spans a third of the width of the cable channel furthest from the pivot axis of the cover.
