Abstract (en)

[origin: EP3162583A1] A liquid discharge apparatus includes a discharge unit that discharges liquid; a drive substrate for driving the discharge unit; a drive substrate accommodating unit that accommodates the drive substrate; a plurality of first air flow generating units that are provided in the drive substrate accommodating unit, and generate air flows; and an exhaust unit that is provided in the drive substrate accommodating unit, and exhausts a synthesis air flow of air flows generated by the plurality of first air flow generating units. With the liquid discharge apparatus of such a configuration, it is possible to suppress the accumulation of heat in the drive substrate accommodating unit.
