Abstract (en)
A fountain pen having a barrel body (12) with a reservoir (14) and an open end (15). A valve (32) is disposed within the barrel body between the reservoir and the open end, the valve selectively opening and closing the open end. A feed assembly (17) includes a ferrule (18) and a nib support (34) that is slidably coupled to the ferrule. A valve opening mechanism (68) extends from one end of the nib support and the valve opening mechanism pushes the valve towards an open position in response to removal of a cap (22) from the feed assembly.
