Abstract (en)

[origin: EP3163248A1] The buttstock for an electric air gun contains a main unit (1), an extension unit (2) configured to a front end of the main unit (1), a detachable and adjustable butt unit (4) configured to a rear edge of the main unit (1), and a cheek support unit (3) that can be raised or lower along a top edge of the main unit (1). The extension unit (2) can be telescoped out of the main unit (1) and the butt unit (4) can also be extended backward for different distance so as to suit users of various arm lengths. The cheek support unit (3) on the other hand can be raised to various heights so that users of different neck lengths can more comfortably operate the electric air gun.
