Abstract (en)

[origin: WO2016001537A1] The present invention relates to a facility for drying and milling raw, wet inert materials, of the type comprising: drying means including a chamber into which the material to be dried is fed in bulk; a source of pulsed hot gas at the inlet of the drying means; an aerualic mill; means for filtering dust, at the outlet of the mill; characterised in that it includes a single hot-air suction means located downstream from the mill and shared between the drying means and the mill. Means for feeding the hot gas from the source are provided, passing through the various drying, milling and filtering means until reaching the single suction means downstream from the facility and arranged downstream from the filtering means.
