Abstract (en)

[origin: WO2016003354A1] The invention relates to a system for glazed balconies, comprising a corner element (1) having a first and a second side wall portion (4, 5) mutually connected at an angle to one another, the free edges of which are intended to be connected to free edges of a first and a second side wall element (2, 3). The free edge (9) of the first side wall element (2) and the free edge of the first side wall portion (4), respectively, comprise locking members (17, 24) for locking in a direction along the plane of extension (A) of the first side wall element (2). The free edge (10) of the second side wall element (3) comprises first and second mutually spaced supporting portions (31, 32), which have an extent along the plane of extension (B) of the second side wall element (3). One of the first and second supporting portions (31, 32) of the free edge (10) of the second side wall element is detachably arranged to enable insertion and locking of the second free edge (8) of the corner element (1) between the first and second supporting portions (31, 32).
