Abstract (en)

[origin: WO2016000630A1] A method of dynamically configuring functions of a machine is disclosed. An agent is provided to a first machine, thereby receiving a projectable space instance. The projectable space instance is configured in a second machine for creating a workspace and transmitted to the first machine based on a predefined protocol. The projectable space instance is parsed with the agent to automatically build a working environment for operating therein a projected workspace corresponding to the workspace created by way of the projectable space instance.
