Abstract (en)

[origin: WO2016004372A1] Systems and methods for authenticating a product using a magnetic code are disclosed. The systems and methods include detection of a magnetic code on the product using a device comprising a magnetometer, correlating the detected magnetic code to a symbolic code, determining whether the symbolic code matches a symbolic code stored in a database, and receiving, by the device, a signal indicating that the product is authentic if the symbolic code matches a symbolic code stored in the database.
