Abstract (en)
The present invention relates to a billet (10) descaling apparatus, which removes a scale formed on a surface of a circular billet, including two roller units (100) disposed longitudinally spaced apart from each other and configured to rotatably support a circular billet (10); two or more cutting units (200) disposed along a lengthwise direction parallel to the longitudinal direction of the two roller units (100), and configured to perform a cutting work on the surface of the billet along equal lengths of the billet (10); and a push unit (300) configured to move the billet along said longitudinal direction during its processing by each of the cutting units.
