Abstract (en)
[origin: EP2463449A1] The body (1) has an opening three-dimensional structure, and upper structural body units comprising vertical hollow support elements (4), which is elevated by a base grid (3). The support elements are tapered upwardly, where the structural body units are nested by bottom-sided guidance of the support elements of the lower support body unit in the support elements of the upper structural body unit. Lateral boundary of the structural body units is formed by a part of the vertical support elements. A connection device connects the adjacent structural body units in a trench system. An independent claim is also included for a trench system comprising a structural body.
